

Comment regarding Docket No. 16-421

To Whom it May Concern,

It is important for human health and the health of our planet that we do not add more wireless radiation to our environment. A government study has just shown that the radiation used in our wireless telecommunications causes cancer. This is just one of thousands of studies showing harmful effects of this technology.

Please work to support those who are working on better WIRED networking rather than wireless. The 5G frequencies could be very, very harmful. It will be too late if we discover just how harmful after this technology is rolled out. Please slow down the roll-out until adequate research has been done to determine health and environmental impacts.

It is unconscionable to speed up the irradiation of the world's population when there is so much evidence that it causes harm. Please read:

— The National Toxicology Program Study at <http://ntp.niehs.nih.gov/results/areas/cellphones/index.html>

— The BioInitiative Report (summary of thousands of studies) at <http://www.bioinitiative.org/>

I have been injured by wireless technology, having been overexposed sitting next to a wireless broadband modem for years. I can no longer go into public spaces because wi-fi and cell phones make me physically ill. While only about 3% of the population is affected with a conscious sensitivity to the extent I am, wireless radiation is linked through research to many other conditions and diseases because it affects everyone at the cellular level. The public health consequences are immense.

Please examine your conscience and do the right thing. Protect public health and encourage the tech industry to explore safer technology.

Sincerely,
Ellen Whitaker
